

SOLUTION BRIEF

# Fuel Better Financial Decisions

Secure and accelerate performance for data analytics

Accurate, timely information is the life-blood of the financial services industry. Data-driven insights need to be produced with speed and precision to optimize customer financial assets – and PCoIP solutions are here to help.

Virtual desktops built with PCoIP® technology provide brokers, traders, even financial software developers a high-fidelity and responsive computing experience. But more importantly, IT can rest easy knowing that PCoIP technology safeguards customer data and corporate IP by securing them in the public cloud, private data center, or combination of both – and enables seamless access anywhere, anytime to ensure business continuity.

## Comply with Stringent Security Requirements

PCoIP technology is the leading remote display protocol for securing intellectual property and customer data. It delivers a secure, high-fidelity computing experience by encrypting and transmitting information in the form of pixels to the workstation. No business information ever leaves the cloud or data center.

## Reduce IT Complexity and Cost

Automatically provision remote desktops, manage cloud compute costs, and entitle secure PCoIP connections to remote Windows or Linux workstations, all from a single console. PCoIP solutions also reduce time spent on infrastructure management and eliminate the need to re-write applications for the cloud.

## Facilitate Decision-making

Provide portfolio managers and traders with technology they can rely on when breaking news prompts them to respond or transact quickly. Deliver high-performance virtual desktops that can handle the data analytics technology required to find customer opportunities and improve financial decision-making.

## Multicloud Support

Transition to the cloud on your terms. Cloud Access Software supports any mix of private or public cloud environments, Windows or Linux virtual desktops, and GPU or non-GPU based infrastructure for all your users.

## Unrivalled Remote Access

PCoIP solutions present a unique opportunity to hire highly sought professionals, no matter their location. Whether it be to hire developers to build trading software or brokers to manage client portfolios remotely, PCoIP solutions are high-performance secure solutions.

## Seamless Collaboration and Business Continuity

Whether working at an office, from home, or an off-site meeting, PCoIP solutions enable secure access to applications and data anywhere because they remain in the data center or cloud of choice.

**“ Teradici Cloud Access Software is just what we want from a secure remote access solution. Developers have a hands-on experience—and yet from a security perspective they’re completely hands off. They can work with intellectual property without actually touching it. ”**

## Solutions

Teradici All Access subscription plans give you PCoIP remoting solutions that lower IT costs and administrative time while allowing your team the flexibility to work any way they need to. With All Access, you can now securely deliver workspaces and applications from the cloud or datacenter of your choice - migrate your existing applications, mobilize your creative teams or leverage the power of GPUs in the cloud.

### Desktop Access

For VMware Horizon or Amazon WorkSpaces users, and PCoIP Zero Client and Management Console Enterprise administrators.

### Cloud Access

Deliver Windows or Linux workloads from private data centers, public clouds or any combination of the two. Includes support, resources, and brokering for PCoIP Remote Workstation Cards.

### Cloud Access +

Deliver graphics-intensive Windows or Linux applications from private data centers, public clouds or any combination of the two. Includes support, resources, and brokering for PCoIP Remote Workstation Cards.

### Professional Services

Our Professional Services deliver the expertise and experience of our engineering and support teams. As your trusted PCoIP technology partner, we will help design, integrate and optimize your PCoIP deployments, so you can focus on your core business.
